

Ipswitch WS_FTP Professional 2006

The Smarter Way to Transfer Files

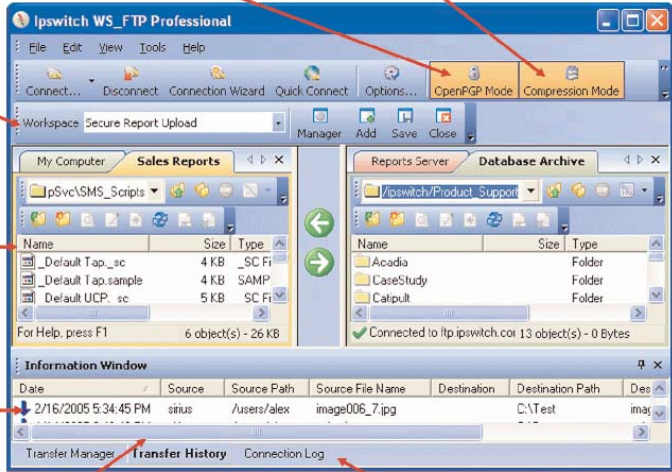

Datasheet

Move data anywhere, anytime in complete security

Ipswitch WS_FTP® Professional is the world's most popular file transfer client. Over 60 million users use WS_FTP every day to make data management tasks faster, easier and more secure. In the latest release, WS_FTP Professional 2006, Ipswitch has delivered dozens of exciting new features to allow users to manage any kind of digital information. No other file transfer client offers the reliability, ease-of-use, security and compatibility of WS_FTP Professional 2006.

Enhanced protocol support, built-in compression and bullet-proof security

WS_FTP Professional 2006 now supports file transfer over HTTP and HTTPS protocols, in addition to many other Internet data management standards like FTP and SSH. While files are being transferred, they can be automatically compressed into archive files in .ZIP format, reducing transfer time and improving throughput. WS_FTP Professional is the only file transfer client to offer 256-bit Advanced Encryption Standard (AES) keys with SSL transfers, making data encrypted with AES secure enough for classified government use.

Simplify complex data management tasks with Workspaces that connect to multiple local and remote sites instantly

Secure your data against prying eyes with OpenPGP mode and 256-bit AES

Save time and bandwidth by compressing files before transfer

Intuitive and powerful interface with multiple local and remote views and dockable panes

Transfer multiple files to and from multiple servers quickly and easily

Alert colleagues or kick off processes with e-mail notification of data transfers

Track the movement of data with detailed logging

Breakthrough Usability

WS_FTP Professional 2006 introduces Workspaces, a new way of speeding up the setup of data management tasks. Workspaces have been comprehensively designed and tested with users to maximize ease-of-use. With Workspaces, users can create, update and recall any combination of remote servers and local file systems they need to rapidly automate data transfers. In addition to saving login and working directory information, Workspaces also save users' protocol choices, ensuring that the proper level of security is always applied to data transfer operations.

Smarter workflow

Moving data and information through an organization typically is part of a workflow of some kind. With WS_FTP Professional 2006, scheduling, scripting and a new, integrated email notification capability make it easy to set up and execute these workflows. For example, WS_FTP Professional can send email notifications when files are sent or received, and thereby begin the next step in the workflow, for example, a database consolidation process.

WS_FTP: the standard for a reason

Ipswitch WS_FTP Professional is the leader in file transfer technology because it has the most secure, feature-rich client technology available. WS_FTP Professional 2006 supports the widest ranges of uses - from ad hoc transfers to critical data collections — easily and securely in the industry's most approachable and attractive user interface. Data management today is more important than ever because of the rise of mobility in computing: data created almost anywhere must be moved to where it is required rapidly and securely. Ipswitch WS_FTP Professional 2006 is the standard for file transfer on the Internet.
